4422 Burners are widely used on heat treat and nonferrous melting furnaces, kilns, ovens, air heaters, dryers, chemical process equipment, and other applications where superior temperature uniformity is required.

OPERATION FROM FUEL RICH TO EXCESS AIR WITH LOW NOx EMISSIONS

These sealed-in, nozzle-mix burners are stable over a wide range of air/gas ratios from large amounts of excess air, to stoichiometric (chemically correct air/gas ratio), up to 50% excess fuel (provided additional air for combustion is supplied to the furnace near the burners). Burners can be ignited at rich, lean, or correct air/gas ratio, then immediately turned to high fire. NOx emissions are low for all air/gas ratios.

The most common ratio control system for 4422 Burners uses a cross-connected regulator. When appropriate for the application, fully metered flow systems and fuel only control are very satisfactory. Required gas pressures are low: 1 osi at burner for coke oven gas, less for natural gas (approximately 0.3 osi).

* Excess air rates are improved with constant pilot air.

BENEFITS OF EXCESS AIR

Excess air can improve temperature uniformity by avoiding hot spots in front of burners, by churning furnace atmosphere to reduce stratification, and by creating positive furnace pressure to eliminate cold air infiltration. Excess air can give very high effective burner turndown. Thus, a furnace used for high temperature work (such as heat treating at 1900 F) with burners firing on stoichiometric air/gas ratio can also be used for low temperature jobs (such as drawing or drying at 600 F) with burners firing on lean (excess air) air/gas ratio.

There is a potential increase in fuel consumption because of heating extra air. The benefits, such as better products from improved heating, far outweigh the small increase in fuel costs. Consult your Fives North American field engineer for an analysis of your application.

APPLICATION TEMPERATURES

The 4422 burners can be used with chamber temperatures up to 2000 F. If furnace temperature could rise above 1900 F after shutdown, some air should be maintained through the burner to prevent overheating. For higher temperature service (>2000 F), see Bulletin 4425.

STANDARD CONSTRUCTION

Burner bodies are heat resistant cast iron with Inconel air tubes. Mounting plate and tile assembly can be separated from the burner body for installation convenience. Air and gas connection orientation can be rotated in 90° intervals. When reassembling the burner, the pilot and flame detector notches in the tile and mounting must be in proper alignment with the pilot and flame detector connections on the burner body (applies to 4422-2 through 4422-6 sizes). Burner is complete with cast iron mounting plate and 9” long 3200 F castable burner tile which must be supported and sealed in a hard refractory furnace wall. (See page 2 for optional construction suitable for fiber lined furnaces.) When the furnace wall is thicker than the tile length, the tunnel beyond the end of the burner tile should be flared at a 30° or greater included angle, starting at the OD of the tile. Extension tiles are not recommended.
Optional Constructions

Burner connections are provided for mounting pilot or direct spark igniter, and flame detector. Burners are shipped with pipe plugs in the openings. Burner flame may be seen through the rear observation port. (Observation port is not to be used for mounting of flame detector.) Burner air pressure can be measured at the tap location provided. For additional construction information refer to Dimensions & Parts List 4422-2.

LIGHTING AND FLAME SUPERVISION

A 4011-12 pilot set is recommended for individual burner ignition. When multiple burners share a single pilot pre-mix header, a 4021-12 pilot tip per burner with an appropriately sized air/gas mixer is recommended. A manual torch can be used in some applications. The burner can be direct spark ignited with either the 4055 Direct Spark Igniter (4055-D for 4422-2 through -6-B and 4055-B for 4422-7 and -6 sizes) or the 4051-D Air Assisted Igniter. The 4051 Air Assisted Igniter is recommended because it ignites the burners over a wider operating range. If using direct spark ignition of main flame, use standard 6000 volt transformer. Half-wave ignition transformers can be used only with the 4055.

A flame rod or ultraviolet (UV) detector can be installed in one of three holes in the body, using an adapter listed in Bulletin 8832. UV scanners allow igniting with up to 14 osi main air. If flame rods are used, 4422-2 through -6 Burners must be ignited at 1 osi or more main air. Do not apply flame rods to -7 and -8 size burners. When using flame supervision, an interrupted pilot is required—do not use constant or intermittent pilots.

Startup and Adjustment: Refer to Bulletin GB-M1 for startup and adjustment of a nozzle-mix burner with ratio regulator air/fuel ratio control.

EQUIPMENT OPTIONS

The 4422 is offered in many physical arrangements to accommodate installation and operating requirements.

DOUBLE PILOT AND FLAME SUPERVISORY CONNECTION (4422D)

This special burner body has two sets of connections for mounting pilot or spark igniter and flame detector. This permits a variety of piping arrangements or redundant pilots and flame detectors. It is available only in -2 through -6-B burner sizes and is otherwise identical to a standard burner. For dimension information refer to Dimensions & Parts List 4422-5.

HINGED BURNER BODY (4422HR OR 4422HL)

There is a hinge between the cast mounting plate and burner body. The hinge provides easy access to the burner tunnel for cleaning deposits that may result from the process (incineration is an example). During operation, a latch firmly holds the burner body against the mounting plate. The burner is available with the hinge on either the right or left side. Pilot and flame detector connections are located opposite the hinge.

To specify hinge location: When looking at the rear of the burner with the air pipe entering from above (12 o’clock position) "HL” specifies the hinge on the left side (shown in drawing) while “HR” specifies the hinge on the right side. For dimension information refer to Dimensions & Parts List 4422-6.

The burner can be ordered without the tile and mounting plate. This is useful where a mounting plate and tile already exist or for special construction furnaces. Refer to Dimensions & Parts List 4422-2.

FLANGELESS MOUNTING (4422- -FM)

Used in furnace construction where there is no steel shell, only refractory. Identical to standard burners except no mounting flange. For dimension information refer to Dimensions & Parts List 4422-4. Only available with the standard burner or double boss option.

FIBER WALL MOUNTING (4422- -Z)

This construction can be used to locate the tile face flush with your furnace wall. Because the round tile is encased in RA330 expanded metal for all but 2” of its length, it is particularly suitable for fiber-lined furnaces or other applications where the tile is not supported and contained. The tile should be insulated to prevent temperature over 1800 F from reaching the metal. Specify the mounting flange “Z” dimension between 2” and 9” to the nearest 0.5” to locate the tile face flush with your inside furnace wall. For dimension information refer to Dimensions & Parts List 4422-7.
**TILE SUPPORT JACKETS**

(4422- -LC, 4422- -L4, 4422- -L9)

4422 Burners with the standard 9" long square tiles are also available with support jackets for applications such as air heaters where frequently the tile is not supported by refractory. They also can be mounted in furnaces when desired. Jackets are available in three different metals and maximum temperature ratings. They must be protected with sufficient insulation so as not to exceed rated temperature. Maximum temperature rating for jacket metals depends upon frequency of heat-up/cool-down cycles. As an example, batch annealing furnaces that are heated and cooled every day should use the "intermittent exposure" ratings. Burners in a continuous annealing furnace that remain at the same temperature for months at a time, can use the higher "continuous" rating.

**OTHER EQUIPMENT OPTIONS**

For application of burners to chamber temperature over 2000 F, see Bulletin 4425.

For 4422/25 burners with slotted discharge tiles that produce a fishtail shape flame, see Sheet 4425-2.

For application of 4422/25 burners to high combustion chamber pressures (up to 15 psi), contact your Fives North American office.

For use with preheated combustion air systems, refer to Bulletins 4824 (up to 1000 F air) and 4825 (up to 1200 Fair).

For burners with larger heating capacity, refer to Bulletin 4545 or 4514 or consult your Fives North American field office.

For firing oil and/or gas (dual fuel) refer to Bulletins 5422 and 6422/25.

**Example 4422 Catalog Numbers**

top examples are given for smallest to largest available burner sizes

**Standard Burner**

4422-2-BO through 4422-8-ABO burner only

4422-2 through 4422-8-A burner complete w/9" tile

**Standard Burner With Tile Jacket**

4422-2-LC through 4422-8-ALC burner complete w/9" tile and steel jacket

4422-2-L4 through 4422-8-AL4 burner complete w/9" tile and 304 SST jacket

4422-2-L9 through 4422-8-AL9 burner complete w/9" tile and 309 SST jacket

**Burner With Double-Boss Body**

4422D-2-BO through 4422D-6-BBO burner only w/double-boss body

4422D-2 through 4422D-6-B burner complete w/9" tile and double-boss body

4422D-2-LC through 4422D-6-BLC burner complete w/9" tile, double-boss body and steel jacket

4422D-2-L4 through 4422D-6-BL4 burner complete w/9" tile, double-boss body and 304 SST jacket

4422D-2-L9 through 4422D-6-BL9 burner complete w/9" tile, double-boss body and 309 SST jacket

**Burner With Hinged Burner Body**

4422HR-2-BO through 4422HR-8-ABO burner only w/right-hand hinged body when main air is at 12 o’clock

4422HL-2-BO through 4422HL-8-ABO burner only w/left-hand hinged body when main air is at 12 o’clock

4422HR-2 through 4422HR-8-A burner complete w/9" tile and right-hand hinged body when main air is at 12 o’clock

4422HL-2 through 4422HL-8-A burner complete w/9" tile and left-hand hinged body when main air is at 12 o’clock

4422HR-2-LC through 4422HR-8-ALC burner complete w/9" tile and steel jacket with right-hand hinged body when main air is at 12 o’clock

4422HL-2-LC through 4422HL-8-ALC burner complete w/9" tile and steel jacket with left-hand hinged body when main air is at 12 o’clock

4422HR-2-L4 through 4422HR-8-AL4 burner complete w/9" tile and 304 SST jacket with right-hand hinged body when main air is at 12 o’clock

4422HL-2-L4 through 4422HL-8-AL4 burner complete w/9" tile and 304 SST jacket with left-hand hinged body when main air is at 12 o’clock

4422HR-2-L9 through 4422HR-8-AL9 burner complete w/9" tile and 309 SST jacket with right-hand hinged body when main air is at 12 o’clock

4422HL-2-L9 through 4422HL-8-AL9 burner complete w/9" tile and 309 SST jacket with left-hand hinged body when main air is at 12 o’clock

**Fiber Wall Mounting Burners**

4422-2-Z through 4422-8-AZ burner complete w/"Z" dimension (2" to 9" round)

4422D-2-Z through 4422D-6-BZ burner complete w/double-boss body and "Z" dimension (2" to 9" round)

**Flangeless Burners**

4422-2-FM through 4422-8-AFM burner complete w/9" tile and flangeless mounting

4422D-2-FM through 4422D-6-BFM burner complete w/9" tile, double-boss body and flangeless mounting
Ordering Information

Blank = burner with standard tile and mounting
BO = burner only (no tile or mounting)

Jacketed tile
LC = steel jacket
L4 = 304 SST jacket
L9 = 309 SST jacket
