

Shrink Fitting

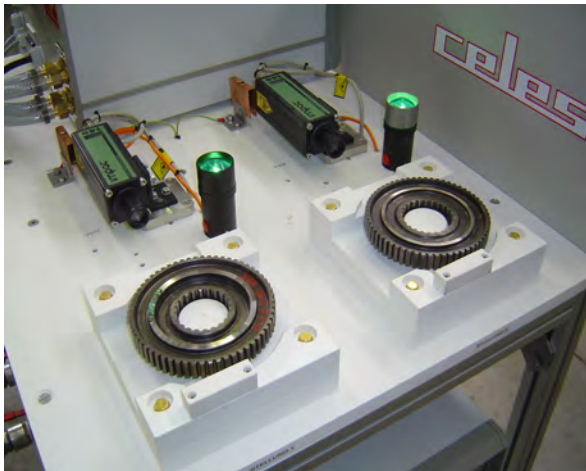

Our solutions to increase your productivity

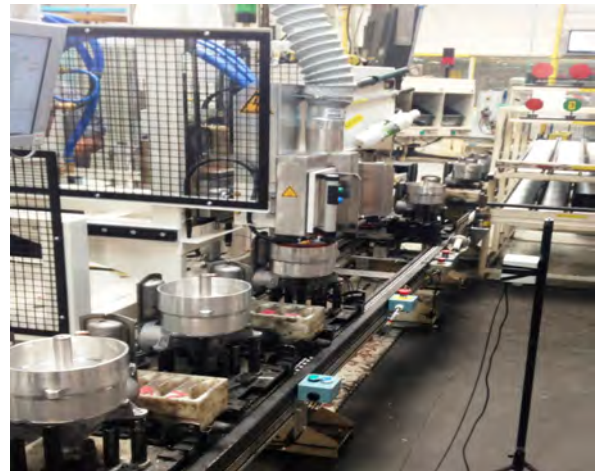

-
- Custom solutions
 - Controlled and localized heating
 - Full integration on assembly lines
 - Energy saving

Shrink fitting is a method in which two or more parts are heated or cooled, taking advantage of thermal expansion or contraction to make a mate between the components.

Specialized since 1967 in electrothermic induction, Fives Celes creates specific induction systems, in order to fulfill clients requests.

Mechanical Gears

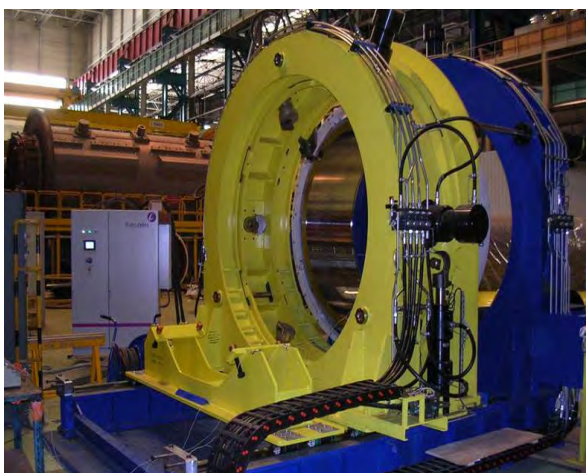

Motor assembly

Alternator Assembly

Aircraft engines

Gas turbine assembly
