Together, we can produce even more energy from cane.

Electricity from biomass has become an essential element of your factories’ economical balance and can considerably increase your profitability. Fives Cail’s equipment portfolio corresponds perfectly to this evolution by proposing a complete range of equipment designed to enhance electricity cogeneration such as the In Line Shredder and the MillMax®.

Compared to conventional technology, the In Line Shredder and MillMax® combination for cane preparation and extraction significantly reduces energy consumption which allows an annual energy savings of 7,300 MWh for a plant with a capacity of 10,000 tonnes of cane per day.

The bottom line: you benefit from an extra 7,300 MWh of energy delivered to the grid.
